

Protection* and relief** with Pic

Protection* and relief** with Pic

Pic's constant focus on consumer needs has led to the development of a new seasonal line dedicated to protection against insects.

This range consists of products designed to prevent insect bites and provide relief after bites or contact with stinging or irritant substances.

Use the multi-insect repellent sprays with caution.

Before using, always read the label and the product information.

*Protection is provided by multi-insect repellent sprays, which are registered as biocides (PT 19).

**Relief is provided by the after-bite pens.
