

New foot care line.

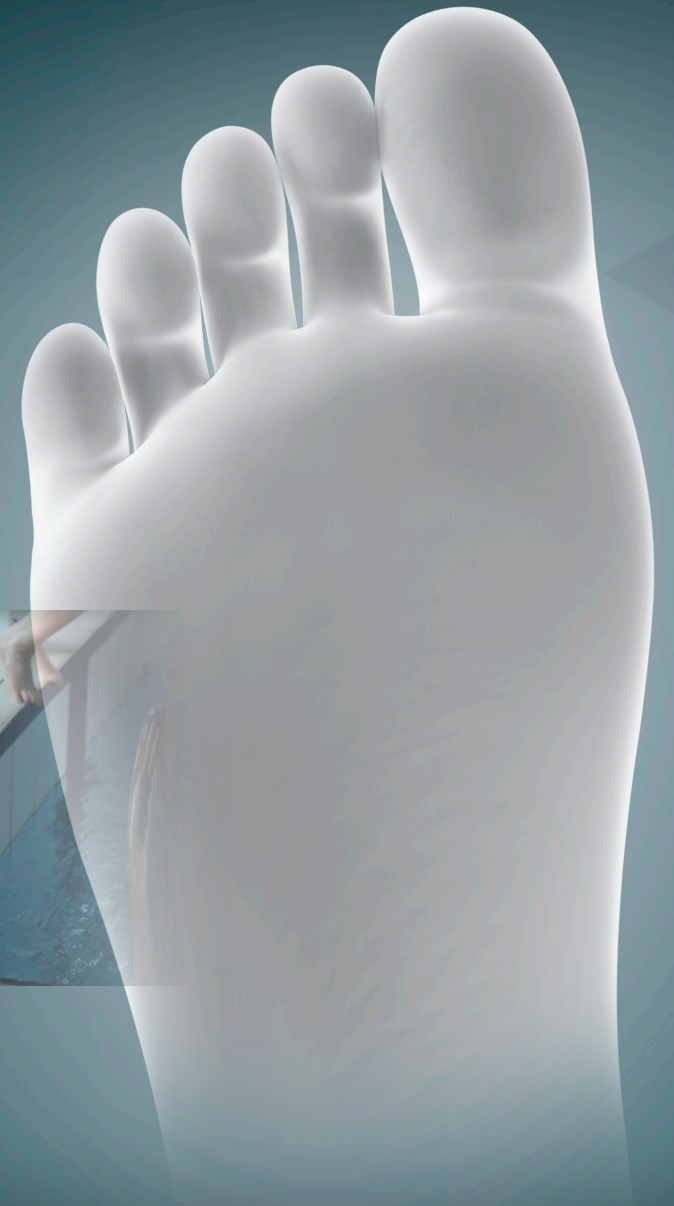

**THE FIRST STEP
TOWARDS A NEW
KIND OF WELL-BEING.
AND NEW
OPPORTUNITIES.**

WELL-BEING STARTS FROM THE FEET: TAKING CARE OF THEM IS IMPORTANT.

The foot is a fundamental and complex body part, and the health of the entire body depends upon it at every stage of life. Pic has always focused on the overall well-being of people, and has chosen to channel its significant know-how and years of expertise in the world of wounds, cuts, grazes and burns into foot care: with a comprehensive, easy-to-use line designed to treat the most common skin problems on the foot.

NEW FOOT CARE LINE.

A WIDE RANGE OF SPECIFIC DRESSINGS TO TREAT BLISTERS, WARTS, CORNS AND CALLUSES.

NEW FOOT CARE LINE. THE PROTECTION THAT PROVIDES RELIEF AND PROMOTES HEALING.

Pic's experience in wound dressing and management has enabled the development of a host of practical solutions to pain from rubbing and heal blisters, warts, corns and calluses faster. Explore all the different shapes and applications in the range.

SKIN BLISTERS.

WHAT ARE THEY?

These are skin lesions that develop due to excessive pressure or friction in a certain area of the foot against the shoe, which causes minor damage between the dermis and the epidermis.

HOW CAN I TREAT THEM?

The hydro-colloid patch acts like a second skin: it protects the skin from friction and pressure, relieving pain. It also keeps the area moist, promoting healing. It stays in place for a long time.

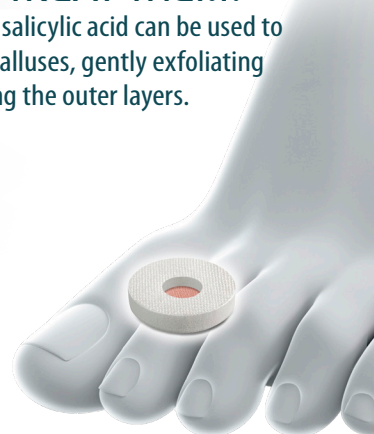

CORNS AND CALLUSES.

WHAT ARE THEY?

In the presence of dry, rough, fragile skin, corns and calluses can form - a self-defence mechanism where the skin thickens to prevent further injury. If not treated, corns and calluses can lead to pain and infections.

HOW CAN I TREAT THEM?

Patches containing salicylic acid can be used to remove corns and calluses, gently exfoliating the skin by removing the outer layers.

VERRUCAS.

WHAT ARE THEY?

Verrucas are benign, common skin warts. They can cause discomfort or even pain, making it difficult to place the foot on the ground or walk. They develop due to the penetration of one of the many strains of the Human Papilloma Virus (HPV) into the skin through small wounds.

HOW CAN I TREAT THEM?

Occlusive patches containing exfoliating agents (such as salicylic acid) can be used: these remove the outer layers of the lesion, making them easier to remove.

FOR BLISTER RELIEF AND HEALING. OVAL PLASTERS | FINGER PLASTERS | PLASTER MIX

GRADUATED THICKNESS

PERFECT SHAPE AND ADHESIVENESS

HYDRO-COLLOID TECHNOLOGY
a moist, physiological environment; protection against rubbing; a barrier against germs

Blister

THREE SHAPES:

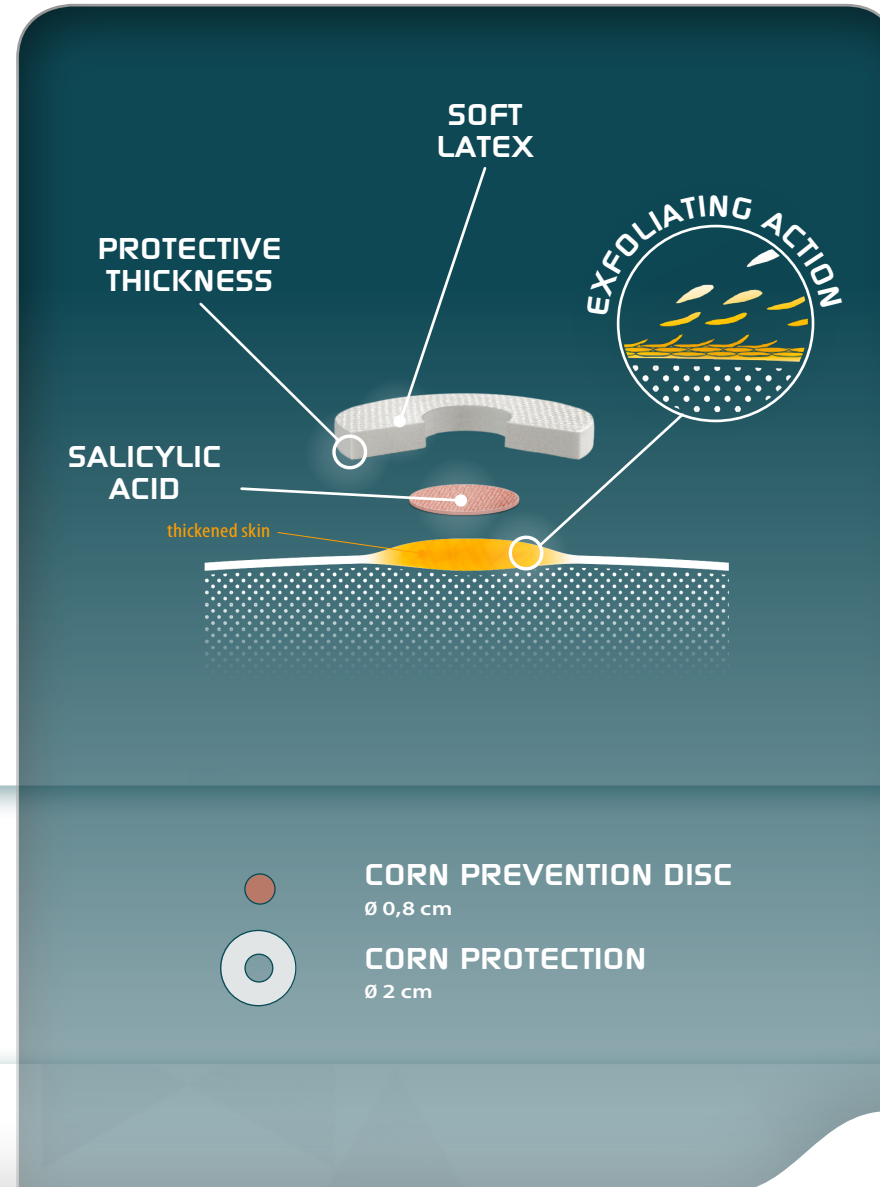

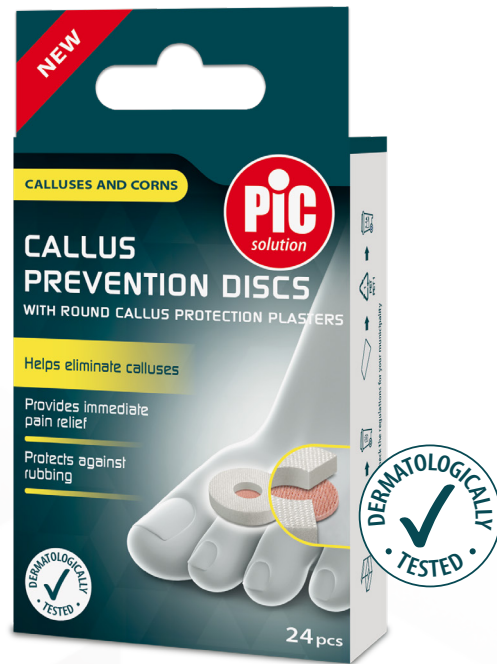

oval	4,4 x 6,9 cm
finger	1,8 x 6,1 cm
rectangular	2,0 x 6,0 cm

Provides immediate relief

Facilitates healing

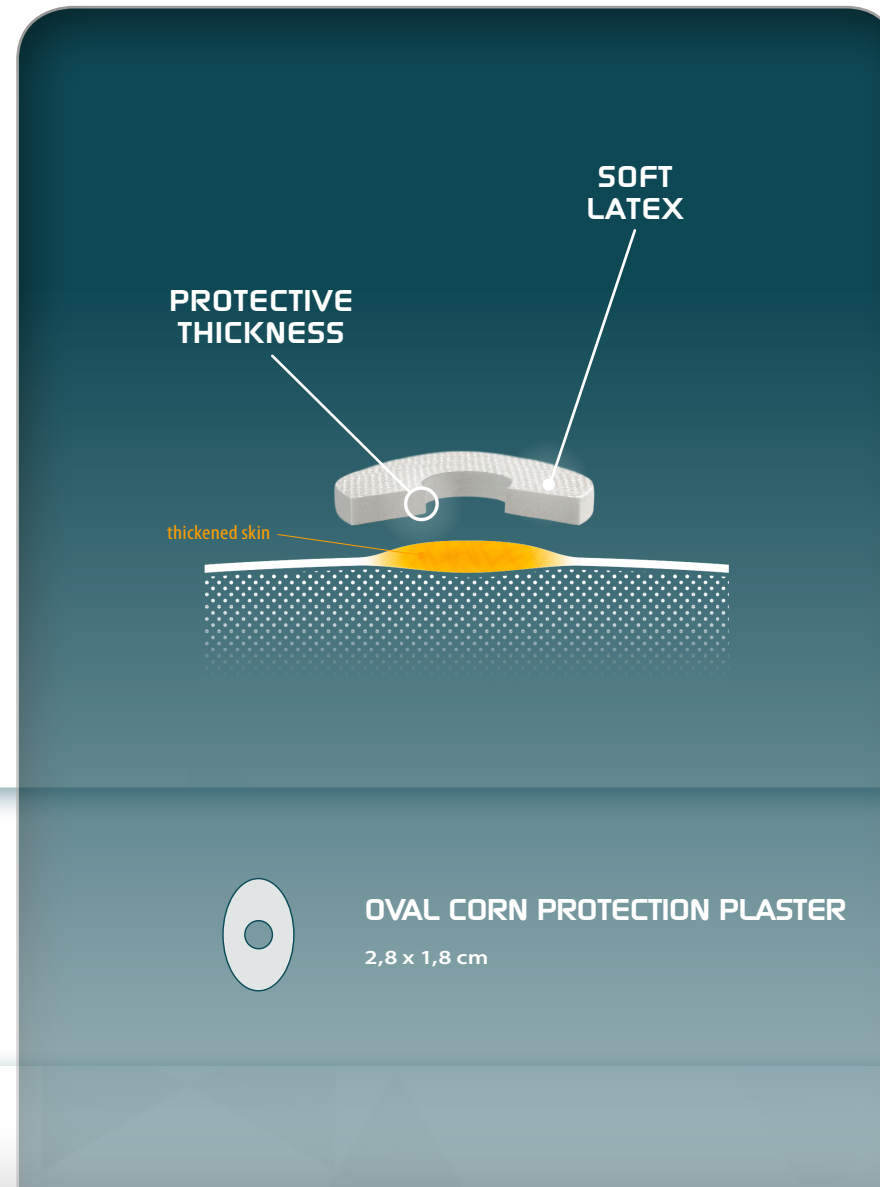

Offers long term protection

FOR THE PROTECTION AND REMOVAL OF CORNS AND CALLUSES. CORN PREVENTION DISCS WITH ROUND CORN PROTECTION PLASTERS

- Helps to get rid of corns and calluses
- Provides immediate relief
- Protects against rubbing

FOR THE PROTECTION AND REMOVAL OF CORNS AND CALLUSES. OVAL CORN PROTECTION PLASTERS

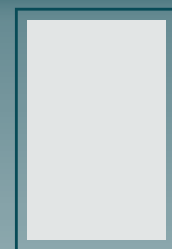

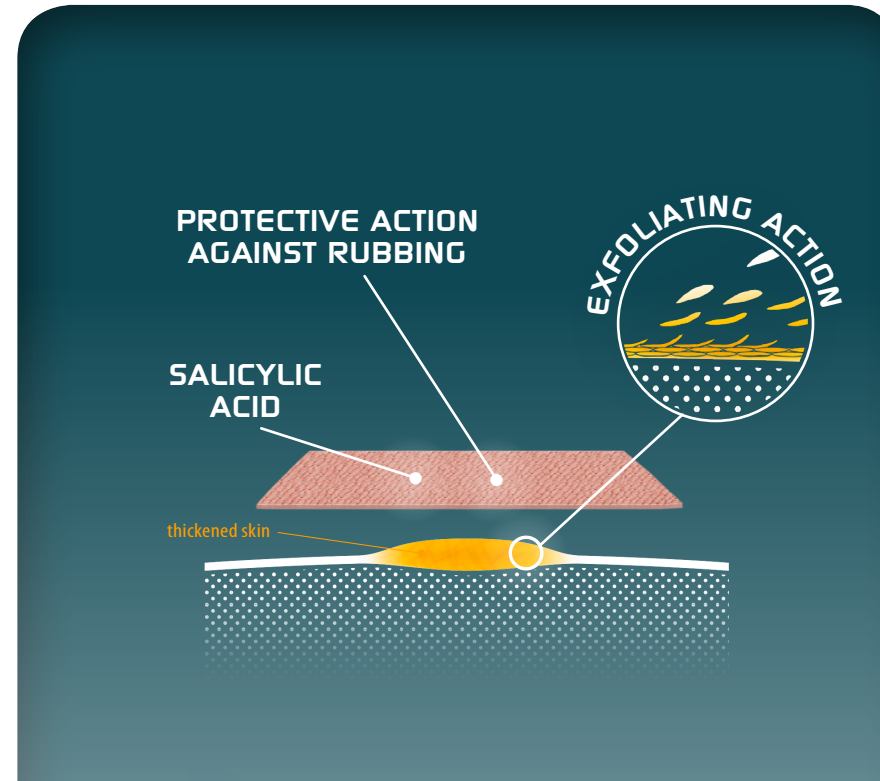

Provides immediate relief

Protects against rubbing

Soft and comfortable

FOR THE PROTECTION AND REMOVAL OF CORNS AND CALLUSES. CUT-TO-SIZE CORN REMOVAL PLASTERS

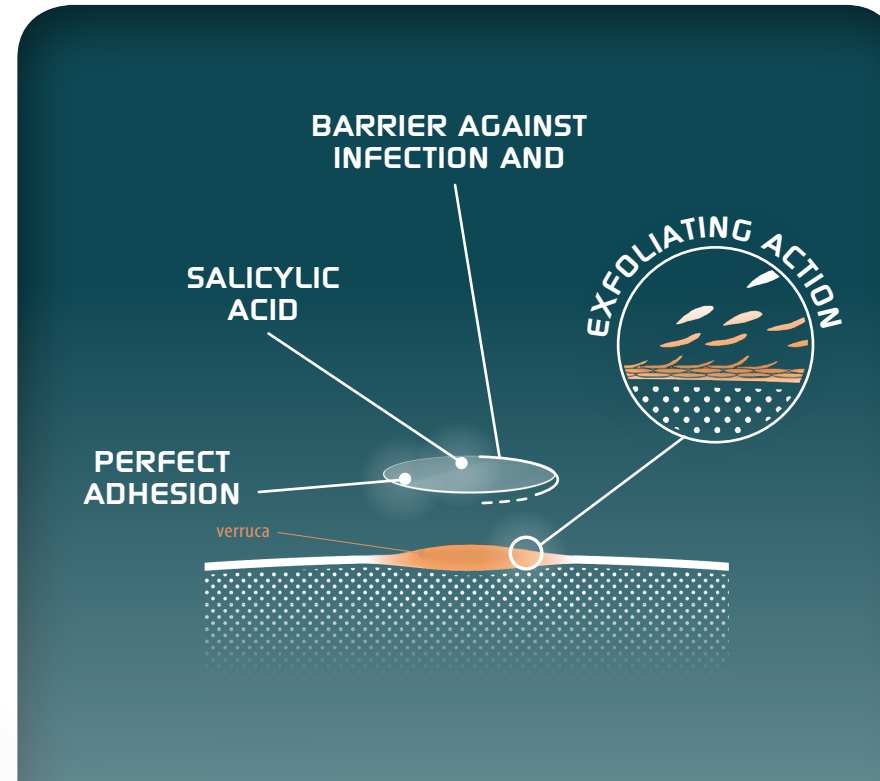

CUT-TO-SIZE STRIPS

6 x 4 cm

- Helps to get rid of corns and calluses
- Provides immediate relief
- Protects against rubbing

FOR THE PREVENTION AND REMOVAL OF VERRUCAS. OCCLUSIVE PLASTERS

Makes removal easier

Limits transmission

Reduces the risk of bacterial infections

ROUND SHAPE

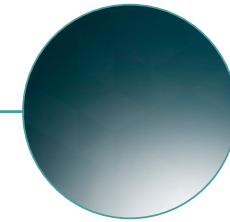

Ø 1,9 cm | Ø 1,2 cm

PACKAGING

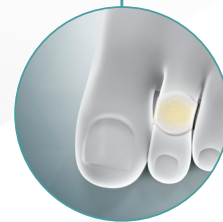

FINGER PLASTERS
Provides immediate relief from pain and pressure
Helps wounds heal
